**Finding the Phoenix** Karel James Bouse PhD,2022-05-18 A journal of self-discovery, Finding the Phoenix, by author Dr. Karel James Bouse introduces seven tools for transformative self-discovery, including how to deconstruct one's lenses, consciousness and identity; use expressive arts to access hidden elements of the self; connect with nature from a mystical perspective; find the meaning of your dreams; use Neo-shamanic techniques for interdimensional self-exploration, demystify anomalous experiences and phenomena; and construct a personal mythology to discover your life purpose. Used synergistically, these tools facilitate a deep, personal investigation that bridges and integrates the conscious with the unconscious, and the mythic with the mundane. Bouse provides you with background information based in academic, scientific, and professional psychological research, and detailed exercises as you follow the fictional "Lucy" through a series of workshops designed to help you find the phoenix of your authentic self. Finding the Phoenix offers a combination of thoughtful instructions, rich personal narrative from the perspective of Lucy, and experiential exercises designed to evoke insight, creativity, and personal development.

*First Dads* Joshua Kendall,2016-05-10 Every president has had some experience as a parent. Of the 43 men who have served in the nation's highest office, 38 have fathered biological children and the other five adopted children. Each president's parenting style reveals much about his beliefs as well as his psychological make-up. James Garfield enjoyed jumping on the bed with his kids. FDR's children, on the other hand, had to make appointments to talk to him. In a lively narrative, based on research in archives around the country, Kendall shows presidential character in action. Readers will learn which type of parent might be best suited to leading the American people and, finally, how the fathering experiences of our presidents have forever changed the course of American history.

Nanotech and the Humanities Chris P. Toumey,2019-01-07 Researchers in the humanities and social sciences have examined nanotechnology for more than twenty years. Their interests include the history of nanotech, religious reactions, and public engagement with it. This collection shows that the humanities and social sciences contribute to our understanding of nanotechnology. It will also serve to accompany textbooks in physics, chemistry, molecular biology, and microelectronics because it illuminates societal and ethical issues in these disciplines.

**Reading Your Male** Mary Farrar,2012-12-10 There is a growing crisis among our men and boys in the area of sexual temptation and sin: pornography use is skyrocketing and increasing numbers of men find themselves entangled in a web they can't seem to escape. Yet many men feel greatly misunderstood by their women, while just as many women feel mystified and powerless to help their men. —Mary Farrar, Reading Your Male Now author Mary Farrar confirms that every woman—whether a wife, mother, or single woman—can play a powerful and pivotal role in the male sexual struggle by entering into her man's world, and: seeing through his eyes, thinking with his mind, feeling with his emotions, connecting with his soul. Reading Your Male de-mystifies inner male sexuality, exposes the enemy's tactics in taking down our men, and equips women to use their innate gifts in becoming a man's greatest ally in the fight for victory. Using biblical insight and up-to-date research, Farrar also tackles some of the most elusive questions women are asking today, such as: Why do men struggle so deeply in the area of sexuality? What are we to think about pornography and masturbation? Why does this generation of men appear to be so reticent? What does a man crave most from a woman? What is a woman's most powerful gift to her man? How can a woman draw out an emotionally unavailable man? What is a healthy view of strong femininity and beauty?

**Invitation to Protein Sequence Analysis Through Probability and Information** Daniel J. Graham,2019-02-06 This

book explores the remarkable information correspondences and probability structures of proteins. Correspondences are pervasive in biochemistry and bioinformatics: proteins share homologies, folding patterns, and mechanisms. Probability structures are just as paramount: folded state graphics reflect Angstrom-scale maps of electron density. The author explores protein sequences (primary structures), both individually and in sets (systems) with the help of probability and information tools. This perspective will enhance the reader's knowledge of how an important class of molecules is designed and put to task in natural systems, and how we can approach class members in hands-on ways.
