*Good Strategy/Bad Strategy* Richard Rumelt,2011-07-19 Good Strategy/Bad Strategy clarifies the muddled thinking underlying too many strategies and provides a clear way to create and implement a powerful action-oriented strategy for the real world. Developing and implementing a strategy is the central task of a leader. A good strategy is a specific and coherent response to—and approach for—overcoming the obstacles to progress. A good strategy works by harnessing and applying power where it will have the greatest effect. Yet, Rumelt shows that there has been a growing and unfortunate tendency to equate Mom-and-apple-pie values, fluffy packages of buzzwords, motivational slogans, and financial goals with “strategy.” In Good Strategy/Bad Strategy, he debunks these elements of “bad strategy” and awakens an understanding of the power of a

“good strategy.” He introduces nine sources of power—ranging from using leverage to effectively focusing on growth—that are eye-opening yet pragmatic tools that can easily be put to work on Monday morning, and uses fascinating examples from business, nonprofit, and military affairs to bring its original and pragmatic ideas to life. The detailed examples range from Apple to General Motors, from the two Iraq wars to Afghanistan, from a small local market to Wal-Mart, from Nvidia to Silicon Graphics, from the Getty Trust to the Los Angeles Unified School District, from Cisco Systems to Paccar, and from Global Crossing to the 2007–08 financial crisis. Reflecting an astonishing grasp and integration of economics, finance, technology, history, and the brilliance and foibles of the human character, Good Strategy/Bad Strategy stems from Rumelt’s decades of digging beyond the superficial to address hard questions with honesty and integrity.

The Pedagogy of Images Marina Balina, Serguei A. Oushakine, 2021-06-01 In the 1920s, with the end of the revolution, the Soviet government began investing resources and energy into creating a new type of book for the first generation of young Soviet readers. In a sense, these early books for children were the ABCs of Soviet modernity; creatively illustrated and intricately designed, they were manuals and primers that helped the young reader enter the field of politics through literature. Children's books provided the basic vocabulary and grammar for understanding new, post-revolutionary realities, but they also taught young readers how to perceive modern events and communist practices. Relying on a process of dual-media rendering, illustrated books presented propaganda as a simple, repeatable narrative or verse, while also casting it in easily recognizable graphic images. A vehicle of ideology, object of affection, and product of labour all in one, the illustrated book for the young Soviet reader emerged as an important cultural phenomenon. Communist in its content, it was often avant-gardist in its form. Spotlighting three thematic threads - communist goals, pedagogy, and propaganda - *The Pedagogy of Images* traces the formation of a mass-modern readership through the creation of the communist-inflected visual and narrative conventions that these early readers were meant to appropriate.

**Speculative Everything** Anthony Dunne,Fiona Raby,2013-12-06 How to use design as a tool to create not only things but ideas, to speculate about possible futures. Today designers often focus on making technology easy to use, sexy, and consumable. In *Speculative Everything*, Anthony Dunne and Fiona Raby propose a kind of design that is used as a tool to create not only things but ideas. For them, design is a means of speculating about how things could be—to imagine possible futures. This is not the usual sort of predicting or forecasting, spotting trends and extrapolating; these kinds of predictions have been proven wrong, again and again. Instead, Dunne and Raby pose “what if” questions that are intended to open debate and discussion about the kind of future people want (and do not want). *Speculative Everything* offers a tour through an emerging cultural landscape of design ideas, ideals, and approaches. Dunne and Raby cite examples from their own design and teaching and from other projects from fine art, design, architecture, cinema, and photography. They also draw on futurology, political theory, the philosophy of technology, and literary fiction. They show us, for example, ideas for a solar kitchen restaurant; a flypaper robotic clock; a menstruation machine; a cloud-seeding truck; a phantom-limb sensation recorder; and devices for food foraging that use the tools of synthetic biology. Dunne and Raby contend that if we speculate more—about everything—reality will become more malleable. The ideas freed by speculative design increase the odds of achieving desirable futures.
