*Academic Knowledge Construction and Multimodal Curriculum Development* Loveless, Douglas J., 2013-11-30 This book presents practical conversations with philosophical and theoretical concerns regarding the use of digital technologies in the educational process, challenging the assumption that information accessibility is synonymous with learning--

Language Teacher Education and Technology Jeong-Bae Son, Scott Windeatt, 2017-06-29 Language teachers' competencies in computer-assisted language learning (CALL) are a crucial factor affecting their own implementation of CALL. However, there is still a concern that many language teachers are not adequately prepared to make effective use of CALL or to identify and evaluate potential CALL solutions. This can be the result of many different factors and raises the question of how to train teachers to develop their CALL knowledge and skills to a greater degree. The discussion of approaches to training language teachers in the use of technology adopted in areas of Australia, the UK and the US provides valuable insights for those already involved in this area, and inspiration for those who have some interest in carrying out this kind of training, but as yet have little or no experience. This book explores the current status of CALL teacher education and discusses issues and challenges CALL teacher educators face in their own contexts. Specifically, it looks at postgraduate

CALL courses offered at different universities to find ways of improving CALL teacher training. It represents the first overview of a topic that is relevant to most postgraduate courses in Applied Linguistics or TESOL across the globe. The use of technology for language learning and teaching is increasingly common but, as is so often the case, training for teachers in how to use that technology remains limited, to a large extent by lack of expertise among trainers.

OHS Electronic Management Systems for Construction Imriyas Kamardeen,2013-01-25 Occupational accidents have a massive personal and social cost as well as a major financial cost. The construction industry is one of the most dangerous industries, accounting for around 20-30% of all occupational deaths worldwide. The accompanying financial cost is either absorbed directly or passed on in the form of higher insurance costs. In addition, regulatory bodies have started to impose legal accountability on all the parties along the construction supply chain. OHS is hard to implement. Construction projects are complex, with a fluid workforce, and the regulatory framework is highly elaborate. OHS Electronic Management Systems for Construction presents a theoretical framework which is designed to overcome these difficulties, integrating OHS management in construction using knowledge management and web technologies. This framework is explained in a clear step-by-step way, as are features such as a systematically developed corporate safety memory, and a virtual learning portal to facilitate on-demand safety training. The ultimate aim of this book is to aid the development of an established safety culture at the organisational level, and the formation of an industry-wide community of safety practice. This is essential reading for OHS professionals and construction managers attempting to change their industry for the better, as well as advanced students and researchers.

*Fall Prevention Through Design in Construction* Imriyas Kamardeen, 2015-06-05 The role of designers has traditionally been to design a building so that it conforms to accepted local building codes. The safety of workers is left up to the contractor building the designs. Research shows, however, that designers can have an especially strong influence on construction safety during the concept, preliminary and detailed design phases. This book establishes the new knowledge and conceptual frameworks necessary to develop a mobile computing-enabled knowledge management system that can help reduce the high rate of construction falls. There are three main objectives of this book: 1. To create a new Prevention through Design (PtD) knowledge base to model the relationships between fall risks and design decisions; 2. To develop a PtD

mobile App to assist building designers in fall prevention through design; 3. To evaluate the practical implications of the PtD mobile App for the construction industry, especially for building designers and workers. The cutting edge technologies explored in this book have the potential to significantly reduce the rate of serious injuries that occur in the global construction industry. This is essential reading for researchers and advanced students of construction management with an interest in safety or mobile technologies.
