Identity Card Technologies Great Britain: Parliament: House of Commons: Science and Technology Committee, Great Britain. Parliament. House of Commons. Select Committee on Science and Technology, 2006-08-04 This report focuses upon the Home Office's identity cards scheme, which uses various technologies including biometrics, information and communication technology (ICT) and smart cards. It explores the ways in which scientific advice, risk and evidence are being managed in relation to technologies that are continually developing. The Home Office has followed good practice by the establishment of advisory committees, the use of Office of Government Commerce (OGC) Gateway Reviews and the development of risk management strategies, along with a policy of gradual implementation. But the Committee has identified weaknesses in the use of scientific advice and evidence. There has been a lack of transparency surrounding the incorporation of scientific advice, the procurement process and the ICT system. Consultations have been limited in scope and their objectives have been unclear. Only some aspects of the scheme such as the biometrics have been determined. The Home Office's decisions demonstrate an inconsistent approach to scientific evidence, and the Committee is concerned that choices regarding biometric technology have preceded trials. With extensive trialling still to take place, the Committee is sceptical about the validity of projected costs. The Committee recommends that the Home Office seeks advice on ICT from senior and experienced professionals and establishes an ICT assurance committee. It is crucial that the Home Office increases clarity and transparency across the programme, not only in problem areas. The programme should also be flexible enough to change should evidence emerge that contradicts existing assumptions.

Elements of Quality Online Education John R. Bourne, Janet C. Moore, 2005 Entering the Mainstream: The Quality and Extent of Online Education in the United States, 2003 and 2004 represents the second annual study of the state of online education in U.S. Higher Education. Supported by the Alfred P. Sloan Foundation, this year's study, like last year's, is aimed at answering some of the fundamental questions about the nature and extent of online education: Will online enrollments continue their rapid growth? Are students as satisfied with online courses as they are with face-to-face instruction? What role do schools see online learning playing in their long-term strategy? What about the quality of online offerings - do schools continue to believe that it measures up? The survey analysis is based on a comprehensive nationwide sample of primary campuses for all active United States postsecondary degree granting institutions that are open to the public.

International Dictionary of Marketing and Communication Frank William. Jenkins, 2012-12-06 This dictionary covers marketing communications in the broadest sense, including advertising, but also extending to public relations which

concerns many organizations not involved in marketing and which have little to do with advertising. Entries have been gathered from around the world, and this dictionary will therefore be valuable to those operating in an international environment where different terms, or terms with different spellings, are used. There are also terms with different meanings, depending on their country of origin. For example, in the UK newspapers are called press media, while in the USA the term print media is more usual. In the UK, print usually applies to printed items, such as sales or educational literature. Likewise, there are big differences between European and American broadcasting systems, and sponsored radio or TV can mean different things around the world. Outdoor advertising also has different terminology in different countries, especially in North America and the UK. In many cases, alternative British and American terms are given, while some are either European or American. Some terminology is specific to a certain country. Entries have been collected from all parts of the world, including the oral media or folk media of the Third World. Financial terms have been included because of their increasing importance in advertising and public relations, and the dictionary reflects the increasing relevance of satellites and computers.
