Schneider,2003 Finding a way to encourage preschoolers and elementary school children to behave well without resorting to scolding, threats, or bribery is a parent's number one challenge. In Rewards for Kids! psychologist and child-development expert Dr. Virginia M. Shiller explains why it works to catch them doing something good. Reward, not bribery, is the key. Dr. Shiller shows parents how to use a variety of child-friendly sticker charts and other tools to help children improve their behavior. This proven positive-parenting technique has been used to help kids overcome such common behavior problems as bedtime procrastination, doing chores, getting along with siblings or friends, getting ready for school and other events on time, and completing homework without fuss. In clear, easy steps, parents will learn creative ways to change their children's problem behavior using an individualized plan that will help children feel good about their new accomplishments. Along the way, Dr. Shiller communicates a great depth of understanding about the needs of children and the many ways of engaging them. The numerous pull-out charts, awards, and certificates are designed to appeal to boys and girls of different ages, ensure plenty of variety, and can be personalized by coloring and decorating them with photos and stickers. This book can make disciplining kids effectively both constructive and fun.

Tiny Changes, Remarkable Results No matter your goals, *Atomic Habits* offers a proven framework for improving--every day. James Clear, one of the world's leading experts on habit formation, reveals practical strategies that will teach you exactly how to form good habits, break bad ones, and master the tiny behaviors that lead to remarkable results. Neurobiology of Sensation and Reward Jay A. Gottfried,2011-03-28 Synthesizing coverage of sensation and reward into a comprehensive systems overview, *Neurobiology of Sensation and Reward* presents a cutting-edge and multidisciplinary approach to the interplay of sensory and reward processing in the brain. While over the past 70 years these areas have drifted apart, this book makes a case for reuniting sensation and reward by highlighting the important links and interface between the two. Emphasizing the role of reward in reinforcing behaviors, the book begins with an exploration of the history, ecology, and evolution of sensation and reward. Progressing through the five senses, contributors explore how the brain extracts information from sensory cues. The chapter authors examine how different animal species predict rewards, thereby integrating sensation and reward in learning, focusing on effects in anatomy, physiology, and behavior. Drawing on empirical research, contributors build on the themes of the book to present insights into the human sensory rewards of perfume, art, and music, setting the scene for further cross-disciplinary collaborations that bridge the neurobiological interface between sensation and reward.
