Development Safety Update Report (DSUR) Harmonizing the Format and Content for Periodic Safety Report During Clinical Trials World Health Organization,2006 Regular and timely review appraisal and communication of safety information are critical to risk management during the clinical development of drugs. Whereas the overall goal of a clinical development program is to characterize the benefit-risk relationship of the product in a particular patient population, the risk to individual

trial subjects is a critical consideration during product development at a time when the effectiveness of a product is generally uncertain. By conducting an overall appraisal of safety data at regular intervals, risks can be recognized thoughtfully assessed and appropriately communicated to all interested stakeholders to support the safety of clinical trial subjects. Although regulatory authorities currently require the submission of a periodic safety report during the conduct of clinical trials, there are substantial differences in the format content and timing of the different reports. The CIOMS VII Working group is proposing in this new publication an internationally harmonized document namely the Development Safety Update Report (DSUR) that is modeled after the Periodic Safety Update Report (PSUR) for marketed products. It presents the general principles behind the preparation and use of the DSUR and a model DSUR. The model is illustrated with sample fictitious DSURs for a commercial and non-commercial (trial-specific) sponsor.

*The Facility Manager's Guide to Environmental Health and Safety* Brian Gallant, 2008 Addressing everything from the history of the federal agencies that enforce the regulations to the requirements of the regulations themselves, this new book provides facility managers with a comprehensive instruction manual for understanding and complying with the major Occupational Safety and Health Administration (OSHA), Environmental Protection Agency (EPA), and Department of Transportation (DOT) regulations. Whether you manage a chemical facility, a warehouse, or an office building, you'll learn what your roles and responsibilities are and how to address your facility's environmental health and safety issues. In addition to discussing such legal requirements as recordkeeping, respiratory protection, hazardous waste management and training, hazard communication, and emergency response, author Brian Gallant provides practical recommendations for establishing and implementing safety and health procedures. He also provides nearly two dozen checklists, forms, and sample documents to help you establish and maintain a successful environmental health and safety program, including a safety meeting report template, a fire prevention audit checklist, a hazardous waste area weekly inspection checklist, and a Chemical Use in Facility Areas Self-Audit checklist.

**Functional Safety and Proof of Compliance** Thor Myklebust, Tor Stålhane, 2022-01-03 This book aims to facilitate and improve development work related to all documents and information required by functional safety standards. Proof of Compliance (PoC) is important for the assessor and certification bodies when called up to confirm that the manufacturer has developed a software system according to the required safety standards. While PoC documents add functionality to the product neither for the developer nor for the customer, they do add confidence and trust to the product and ease certification, and as such are important for the product's value. In spite of this added value, the documentation needed for PoC is often developed late in the project and in a haphazard manner. This book aims at developers, assessors, certification bodies, and purchasers of safety instrumented systems and informs the reader about the most important PoC documents. A typical PoC documentation encompasses 50 to 200 documents, several of which are named in the safety standards (e.g., 82

documents in IEC 61508:2010 series, 101 documents in EN 5012X series and 106 work products in ISO 26262:2018 series). These documents also include further references, typically one to twenty of them, and the total number of pages developed by the manufacturer varies between 2000 and 10000 pages. The book provides guidance and examples what to include in the relevant plans and documents.

**Pharmacovigilance Medical Writing** Justina Orleans-Lindsay,2012-06-22 Pharmacovigilance Medical Writing covers the preparation of pharmacovigilance documents for all stages of the drug development process (i.e. from clinical development through to applications for marketing authorisations to the post-marketing stage). For each document, the book presents a review of the regulatory framework that governs the content of the document, followed by practical guidance (e.g. scheduling, source data, department/functions involved in document preparation/review, appropriate timelines and planning activities), ending with a generic model document compliant with the current guidelines, which can be modified to meet specific company and product requirements.
