Becoming Villagers Matthew S. Bandy, Jake R. Fox, 2010-12-15 The shift from mobile hunting and gathering to more sedentary, usually agricultural, lifeways was one of the most significant milestones in the prehistory of humanity. This transformation was spurred by an alignment of social and ecological forces, pressures, and adaptations, and it took place in broadly comparable ways in many prehistoric settings. Based on a Society for American Archaeology symposium and subsequent Amerind Advanced Seminar in 2006, *Becoming Villagers* examines this transformation at various places and times across the globe by focusing not on the origins of agriculture and village life but rather on their consequences. The goal of the volume is to identify regularities in the ways that societies developed in the centuries and millennia following a transition to village life. Using cases that range from China to Bolivia and from the Near East to the American Southwest, leading archaeologists situate their specific areas of specialization in a broad comparative context. They consider the forces acting to divide and fragment early villages and the social technologies and practices by which those obstacles were, in some cases, overcome. Finally, the volume examines the long-term historical trajectories of these early village societies. This transformative collection makes a powerful case for a renewed and invigorated archaeological focus on large-scale comparative studies. It will be an essential read for anyone interested not only in early village societies but also in the ways in which archaeology relates to anthropology, other social sciences, and history. CONTENTS: "Becoming Villagers: The Evolution of Early Village Societies," Matthew S. Bandy and Jake R. Legal Architecture Linda Mulcahy,2010-12-16 Legal Architecture addresses how the environment of the trial can be seen as a physical expression of our relationship with ideals of justice. It provides an alternative account of the trial, which charts the troubled history of notions of due process and participation. In contrast to visions of judicial space as neutral, Linda Mulcahy argues that understanding the factors that determine the internal design of the courthouse and courtroom are crucial to a broader and more nuanced understanding of the trial. Partitioning of the courtroom into zones and the restriction of movement within it are the result of turf wars about who can legitimately participate in the legal arena and call the

judiciary to account. The gradual containment of the public, the increasing amount of space allocated to advocates, and the creation of dedicated space for journalists and the jury, all have complex histories that deserve attention. But these issues are not only of historical significance. Across jurisdictions, questions are now being asked about the internal configurations of the courthouse and courtroom, and whether standard designs meet the needs of modern participatory democracies: including questions about the presence and design of the modern dock; the ways in which new technologies threaten to change the dynamics of the trial and lead to the dematerialization of our primary site of adversarial practice; and the extent to which courthouses are designed in ways which realise their professed status as public spaces. This fascinating and original reflection on legal architecture will be of interest to socio-legal or critical scholars working in the field of legal geography, legal history, criminology, legal systems, legal method, evidence, human rights and architecture.

Kids' Slips Jeri J. Jaeger, 2004-12-13 The study of speech errors, or slips of the tongue, is a time-honored methodology which serves as a window to the representation and processing of language and has proven to be the most reliable source of data for building theories of speech production planning. However, until Kids' Slips, there has never been a corpus of such errors from children with which to work. This is the first developmental linguistics research volume to document how online processing is revealed in young children, ages 18 months through 5 years, through their slips of the tongue. Thus, this text provides a new methodology and data source, which will greatly expand our ability to uncover the details of early language development. Professor Jaeger's groundbreaking book incorporates both details of her methodology and findings with implications for different aspects of language development, including phonetics and phonology, the lexicon, semantics, morphology, and syntax. While all the child data is included in the book, a Web site hosted by the author provides readers with the adult data as well. Kids' Slips targets those who study language development in linguistics, developmental psychology, and speech and hearing, as well as those who study language representation and processing more generally in the same disciplines.
