Time Map Phonology J. Carson-Berndsen, 2013-03-14 This book is a revised version of my doctoral thesis which was submitted in April 1993. The main extension is a chapter on evaluation of the system described in Chapter 8 as this is clearly an issue which was not treated in the original version. This required the collection of data, the development of a concept for diagnostic evaluation of linguistic word recognition systems and, of course, the actual evaluation of the system itself. The revisions made primarily concern the presentation of the latest version of the SILPA system described in an additional Subsection 8.3, the development environment for SILPA in Section 8.4, the diagnostic evaluation of the system as an additional Chapter 9. Some updates are included in the discussion of phonology and computation in Chapter 2 and finite state techniques in computational phonology in Chapter 3. The thesis was designed primarily as a contribution to the area of computational phonology. However, it addresses issues which are relevant within the disciplines of general linguistics, computational linguistics and, in particular, speech technology, in providing a detailed declarative, computationally interpreted linguistic model for application in spoken language processing. Time Map Phonology is a novel, constraint-based approach based on a two-stage temporal interpretation of phonological categories as events.

processing, number theory, etc.

Reading Complex Words Egbert M.H. Assink, Dominiek Sandra, 2013-06-29 This book brings together current research findings on the involvement of word-internal structure for the purpose of word reading (especially morphological structure). The central theme of reading complex words is approached from several angles, such that the chapters span a wide variety of topics where this issue is important. The Influencing Formula Elizabeth Larson, Richard Larson, 2012-10-01 Today's global business environment is complex. Organizations find it a challenge to keep pace with rapid advancements. Business analysts, project managers, process analysts and other information workers have to influence various stakeholders, regardless of their position in the organization. What makes this ability to influence without authority seem so easy for some and nearly impossible for others? Successful influencers have learned to be trusted advisors in their organizations. They employ three critical ingredients which the authors call the Influencing Formula. This book reveals how the Influencing Formula works and illustrates how it is the new mandate required to effectively influence without authority in any type of organization, large or small.
